Contents of this PDF. Part A reproduces every results table of the article (Tables 3–12, A1, A2). Part B prints every raw result file in full when it has at most 1,000 rows. The six larger files (two all-runs files, the Experiment 2 sensitivity runs, the coherence log and two injected-event lists; 63,000 rows together) are given as exact summaries computed from every row, with the full rows in the CSV files of the same name. **Conventions:** FPR = false-alarm rate; matched = threshold set for a 5% overall false-alarm budget; SeasonalZ = calendar-blind baseline; FACAD-CG = coherence-gated FACAD; p = two-sided Wilcoxon signed-rank test; numbers are shown to 3–4 significant decimals.
